## Software Engineering

### Lab 6

Name : Naitik Ravat

ID : 202101212

Lab Group : 3

**Think over questions :-**

**1) How would you represent testing of the application with multiple browsers?**

**Ans.**

We must utilize a fork to ensure that both operations are completed and output is produced simultaneously in order to reflect testing of the program across two browsers.

**2) Can generation of the patch file and update the Subversion repository be done concurrently?**

**Ans.**

No, it would not be done concurrently. Firstly, patch file will be generated, then that patch will be applied to production code and then the Subversion repository will be updated.

**3) Can patching the production code and updating the Subversion repository be done in parallel?**

**Ans.**

Applying Patch to Production Code: After the patch has been generated successfully, you can move on to this step. The workflow is finished by applying the patch to the production code. Committing Changes to SVN Repository: This step can only be completed after the production code has been patched. The SVN repository is updated after the modifications are committed.

**Learning Objectives :-**

**1) Identify the basic units of work, and visualize the workflow.**

**Ans.**

The process involves creating a clone of the repository, making adjustments to the local code, and then running Firefox and Internet Explorer simultaneously. The procedure will execute if the local copy of the code is committed and every browser passes the test;

otherwise, it will produce a patch file, not commit the local copy of the code, and then update the SVN repository.

**2) Identify activities that could be done in parallel.**

**Ans.**

Both Firefox and Internet Explorer will have their code checked in parallel.

**3) Identify stages from where progress could be made only after a list of criteria is satisfied.**

**Ans.**

- i) If at least one of the two browsers (Internet Explorer and Firefox) fails the testing at the checking step, the code must be modified.
- ii) If a patch file is not able to be created because the local copy has already been committed.
